ZOO CRM — Master Design System

> ***The white-labeling architecture for all ZOO CRM client apps.*** *Version 1.0 | March 29, 2026*

How It Works

```
┌──────────────────────────────────────────┐
│  base.css (Master — neutral defaults)    │  ← Universal foundation
│  ~120 CSS variables: colors, fonts,      │     Every app imports this
│  spacing, shadows, motion, layout        │
└──────────────────────┬───────────────────┘
                       │
          ┌────────────┴────────────┐
          │                         │
┌─────────▼──────────┐   ┌─────────▼──────────┐
│  muzigal.css       │   │  kidzee.css        │  ← Brand overrides (~20 vars each)
│  Navy + Blue       │   │  Purple + Yellow   │     Only what's different
│  Inter font        │   │  Fredoka font      │
│  Sharp radius      │   │  Round radius      │
└────────────────────┘   └────────────────────┘
          │                         │
┌─────────▼──────────┐   ┌─────────▼──────────┐
│  apps/crm/         │   │  apps/kidzee-      │  ← App imports base + theme
│  globals.css       │   │  polichalur/       │
│                    │   │  globals.css       │
└────────────────────┘   └────────────────────┘
```

Key principle: Base defines ~120 variables with neutral defaults. Each theme overrides ~20 variables. The app inherits everything else. Change one variable → the entire app rebrands.

Quick Start: Adding a New Client

```
# 1. Copy the template
cp packages/design-tokens/themes/_template.css \
   packages/design-tokens/themes/newclient.css

# 2. Fill in brand colors, fonts, personality
vim packages/design-tokens/themes/newclient.css

# 3. In the app's globals.css, import base + theme
#    (or copy the variables into the app's :root)
```

Token Reference

Layer 1: Brand Identity (MUST override)

These define the brand. Every client needs unique values.

Token	Base Default	Muzigal	Kidzee	What it controls
`--color-primary`	`#374151`	`#1a1a2e`	`#65318E`	Headers, CTAs, links, focus rings
`--color-primary-dark`	`#1f2937`	`#12121f`	`#4A2366`	Hover states, active elements
`--color-primary-light`	`#6b7280`	`#2d2d4a`	`#8B5CB8`	Subtle backgrounds, borders
`--color-accent`	`#3b82f6`	`#2563eb`	`#FFF200`	Highlights, badges, emphasis
`--color-accent-warm`	`#f59e0b`	`#3b82f6`	`#FFC107`	Secondary accent, warm touches

Layer 2: Personality (RECOMMENDED override)

These set the tone. Professional vs playful. Clean vs warm.

Token	Base	Muzigal	Kidzee	Effect
`--font-display`	System	Inter	Fredoka	Heading personality
`--font-body`	System	Inter	Lato	Reading experience
`--color-bg`	`#ffffff`	`#ffffff`	`#FFFBF5`	Cool white vs warm cream
`--radius-xl`	`0.75rem`	`0.75rem`	`1rem`	Sharp=corporate, round=friendly
`--easing-default`	`ease-in-out`	`ease-in-out`	`bounce`	Subtle vs playful motion

Layer 3: Fine-tuning (OPTIONAL override)

Only override if the brand demands it.

Token	Purpose
`--shadow-glow`	Brand-colored glow on focus/hover
`--gradient-hero`	Hero section gradient
`--gradient-cta`	CTA button gradient
`--color-border`	Warm vs cool border tones

Current Themes

Muzigal (`themes/muzigal.css`)

Aspect	Value
Personality	Professional, clean, musical, trustworthy
Primary	Dark navy `#1a1a2e`
Accent	Blue `#2563eb`
Font	Inter (clean sans-serif)

Radius	Sharp (0.5-0.75rem)
Shadows	Subtle, barely visible
Background	Pure white
Vibe	"Serious music academy"

Kidzee (`themes/kidzee.css`)

Aspect	Value
Personality	Playful, warm, child-friendly, colorful
Primary	Purple `#65318E` (from kidzee.com)
Accent	Yellow `#FFF200` (from kidzee.com)
Font	Fredoka (rounded, playful)
Radius	Round (1-1.5rem)
Shadows	Purple-tinted, warmer
Background	Warm cream `#FFFBF5`
Vibe	"Fun preschool"

Token Categories

Colors (26 tokens)

```
Brand:     --color-primary, -dark, -light, --color-accent, -warm
Semantic:  --color-success, -warning, -error, -info (+ -light variants)
Neutral:   --color-text, -secondary, -muted, -inverse
Surface:   --color-bg, -alt, -subtle, --color-surface, -hover
Border:    --color-border, -light, -strong
```

Typography (14 tokens)

```
Fonts:     --font-display, -body, -accent, -mono
Scale:     --text-xs through --text-display (9 steps)
Weights:   --weight-light through --weight-black (6 steps)
Leading:   --leading-tight through --leading-loose (5 steps)
```

Spacing (14 tokens)

```
--space-0 through --space-24 (4px base unit)
```

Radius (8 tokens)

```
--radius-none through --radius-full
```

Shadows (8 tokens)

```
--shadow-xs through --shadow-2xl, --shadow-inner, --shadow-glow
```

Motion (12 tokens)

```
Duration:  --duration-instant through --duration-lazy (7 steps)
Easing:    --easing-default, -in, -out, -bounce, -smooth (5 curves)
```

Layout (10 tokens)

```
Max-width: --max-width-sm through --max-width-2xl, --max-width-prose
Z-index:   --z-base through --z-toast (8 layers)
```

Rules

1. **Never hardcode hex values in components.** Always use `var(--color-*)`.
2. **Base defines, themes override.** Don't duplicate base values in themes.
3. **Semantic over literal.** Use `--color-error` not `--color-red`. Use `--color-primary` not `--color-purple`.
4. **Themes are thin.** A theme should be ~20 overrides, not 120 copies.
5. **Test with both themes.** If a component looks wrong in one theme, the component is using literal values instead of tokens.

File Structure

```
packages/design-tokens/
├── base.css                  ← Master foundation (~120 tokens)
